

JAMES CHILUMBA NGWIRA

Computer Science Graduate | Full-Stack & Emerging Technologies Developer

About Me

Computer Science graduate with practical experience in software engineering, web application development, and immersive 3D technologies. Developed innovative solutions using blockchain, machine learning, and modern web frameworks through academic research and industry internships. Seeking to pursue a Master's in Computer Science to advance research in intelligent software systems, distributed technologies, and human-centered computing.

Language

- English (Native)
- Kazakh (Beginner)
- Russian (Elementary)

Technical Skills

Programming Languages

Python · Java · JavaScript · SQL

Software Development

OOP · Database Design · Git

Emerging Technologies

Machine Learning · Blockchain

3D & Web Technologies

Three.js

Experience

Web & 3D Developer Intern

KBTU GameLab | Kazakh-British Technical University (KBTU)

3 June 2025 - 31 June, 2025

- Designed and developed an interactive 3D museum website showcasing cultural artifacts from Kazakhstan.
- Implemented immersive virtual environments using modern web technologies.
- Optimized 3D asset loading and rendering for smooth browser performance.
- Integrated interactive object exploration to enhance user engagement and educational value.
- Collaborated with researchers and developers throughout the development lifecycle.

Software Development Intern

ESG KBTU | Kazakh-British Technical University (KBTU)

2 February 2026 - 1 April, 2026

- Designed and developed a functional website prototype to modernize ESG KBTU's digital presence and improve information accessibility.
- Collaborated with stakeholders to translate organizational requirements into user-centered interface designs.
- Improved navigation and interface consistency by applying modern UI/UX principles.
- Produced responsive layouts compatible across desktop and mobile devices.
- Participated in iterative development cycles, incorporating supervisor feedback to refine functionality.

Academic Research Project (Final Year Project)

Immigration Management System for International Students Using Blockchain and Machine Learning

1 December 2025 - 12 June, 2026

- Designed and proposed a next-generation immigration management system to improve document verification, security, and administrative efficiency for international students studying in Kazakhstan.

Key Features

- Blockchain-based credential verification
- Machine Learning algorithms for intelligent document analysis
- Secure digital identity management
- Automated verification workflows
- Scalable system architecture
- Privacy-focused data management

Technologies

- Blockchain Concepts
- Machine Learning
- Database Design
- Software Engineering
- Systems Analysis
- UML
- Web Technologies

ACADEMIC & TECHNICAL PROFILE

Projects

ESG KBTU Website Prototype

- Designed a modern organizational website prototype focused on usability, accessibility, and responsive design.

Kazakhstan Virtual Museum

- Designed a modern organizational website prototype focused on usability, accessibility, and responsive design.

Immigration Management System

- Designed an intelligent digital immigration platform combining blockchain security with machine learning techniques.

Additional Experience

English Speaking Club Instructor

- Planned and delivered engaging English communication lessons.
- Developed interactive educational activities that improved student participation.
- Strengthened leadership, presentation, and cross-cultural communication skills.

Education

KAZAKH-BRITISH TECHNICAL UNIVERSITY – Almaty, Kazakhstan

BSc. Computer System and Software,
September 2022 - July 2026

MCM MUFULIRA SECONDARY SCHOOL – Mufulira, Zambia

High School Education,
January 2016 – November 2020

Skills Summary

Programming  90%

Web Development  91%

Tools & Problem Solving  90%
